Git y Github

Git

- Sistema de control de versiones (VCS)
- Commit
  - Deltas
- Ammend
- Stash / shelve

Git

- Revert
- Reset
- Ramas
  - Checkout
- Tags
- .gitignore

Cheat sheet

Repositorio remoto

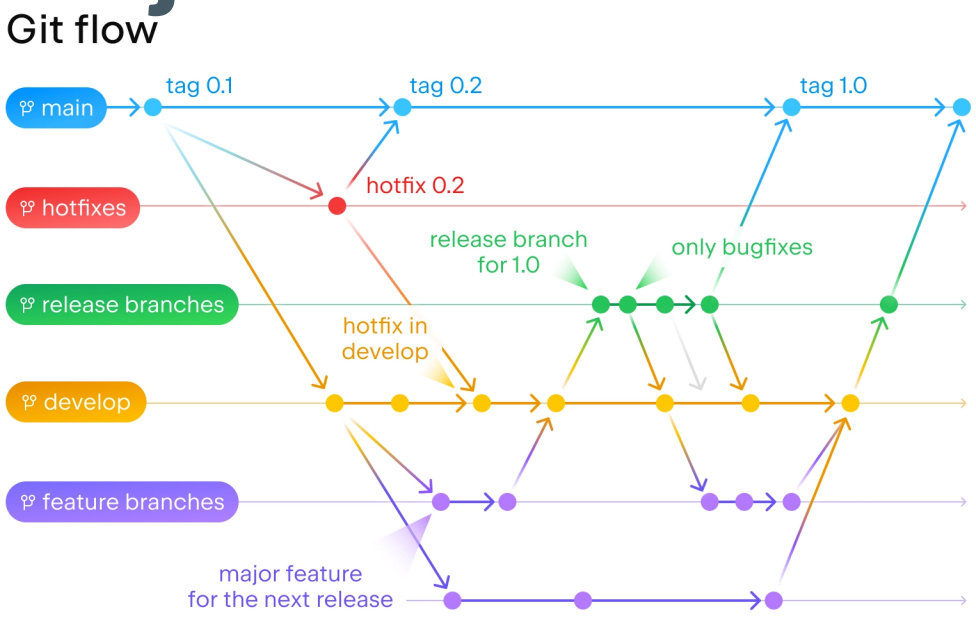
- Descentralizado
- Clone
- Ramas local vs remote
  - Fetch
  - Pull y Push
  - Merge
    - Conflictos: keep ours, keep theirs, resolve conflict manually

Github

- Repositorio en la nube, centralizado
- Cómo contribuir a un repo
  - Pull Requests
    - Permisos
  - Fork
- Documentación
  - README.md
  - LICENSE.md
- Github Actions

Flujos de trabajo

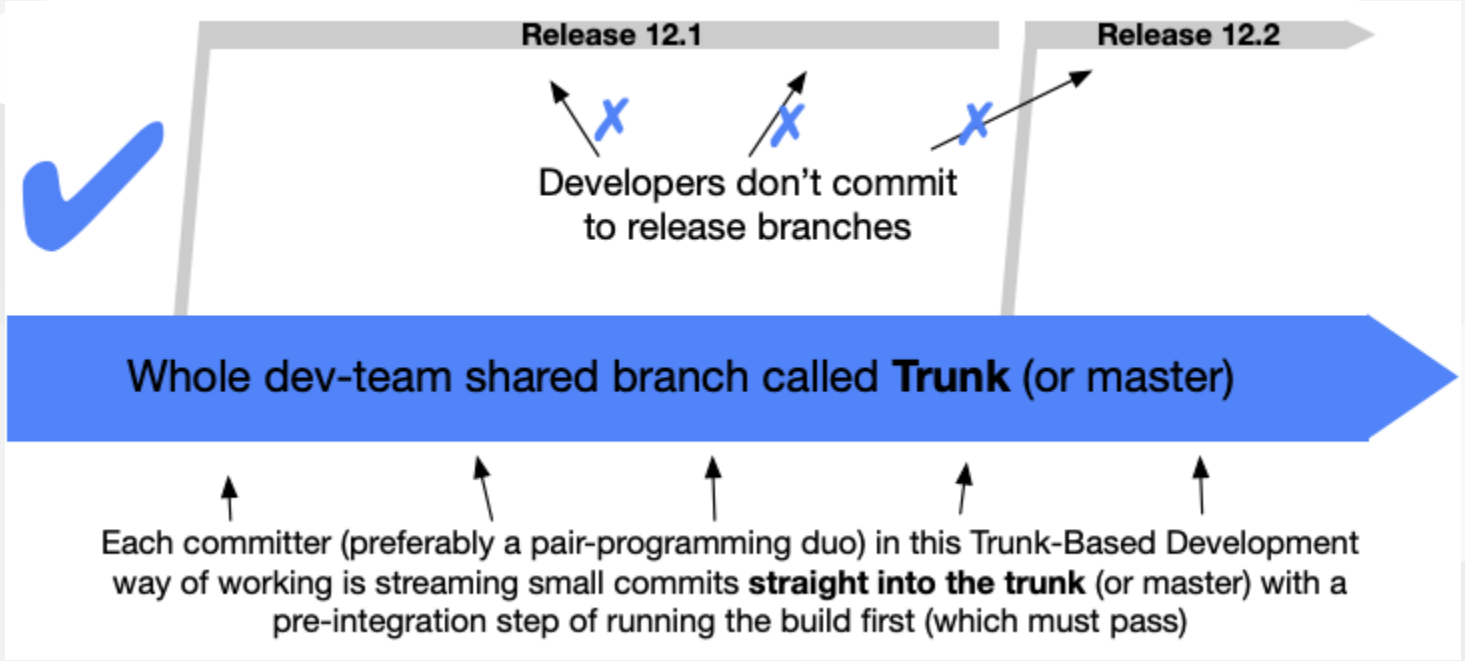
- GitFlow



- The `main` branch is for production code only.
- The `develop` branch is for development code.
- `feature` branches are created from the `develop` branch.
- `hotfix` branches are created from the `main` branch.
- `release` branches are created from the `develop` branch.

Flujos de trabajo

- Trunk Based Development



Buenas prácticas

- Conventional commits
- Commits pequeños
- Commits frecuentes
- No pushear inmediatamente
- Si se trabaja con ramas: integrar la rama principal en la nuestra recurrentemente
